Educate, engage and empower your team to defend your business.

What is Secarma Engage?

Secarma Engage is a secure, flexible learning platform developed to deliver high-impact cybersecurity education across your organisation. Whether you're training new starters, developing your team's knowledge further or deploying a bespoke programme for enterprise clients, our LMS combines expert video content, gamified learning and built-in reporting.

With curriculum developed by our in-house experts, this platform helps you drive security awareness, build measurable capability and demonstrate compliance with ease.

Why Secarma Engage?

Your people are your first line of defence. But traditional training tools can be inconsistent, uninspiring or simply fail to deliver results. Secarma's Learning Management System changes that.

Designed in partnership with education specialists, our governance and technical teams, it provides:

- Targeted, role-specific content
- Easy user and admin management
- Engaging delivery methods
- Clear, exportable compliance reporting

From onboarding and awareness training to tailored enterprise learning pathways, we help you upskill and educate with confidence.

What We Provide

Secure, dedicated learning environment

Each client receives a secure, dedicated area within the platform. Training modules are assigned and managed by Secarma to ensure consistency across L&D.

Video-first content delivered by Jen-AI

All Courses are broken down into modules and sessions within them. You can watch an entire module back-to-back or, for those with limited time, take on 3-7 minute video sessions individually. All our video is built around engaging, expert-written video content from Secarma.

Assessments that adapt to the learner

Each session is complemented by a simple assessment process. Learners receive instant results and cannot skip ahead.

Gamification with digital credentials

Earn digital badges and verifiable certificates for successful completions, including unique IDs and QR codes.

Real-time visibility and control

Admins can view progress, assign courses, set / send reminders and export compliance-ready reports in a few clicks.

Straightforward user management

Upload learners in bulk, assign learning paths to teams or individuals, and manage access levels easily.

Who Is It For?

Secarma LMS is designed to support:

> Organisations onboarding new staff who require a standardised training approach

> Security-focused businesses seeking measurable awareness and behaviour change

> Large organisations rolling out bespoke or role-specific cybersecurity learning

> Managed service providers offering security education to clients

> Internal teams managing compliance, training and risk

> Admins can assign courses, set reminders and adjust limits

> Course completions tracked automatically

> Digital certificates sent by email

Insights

> Dashboards for individual and organisational performance

> Reports on learner progress, team engagement and module completion

> Export to CSV or PDF for audits and records

> Built-in tracking for assessment questions and attempts

Secarma Engage Fees

Foundations

> Secure, client-specific portal

> Courses pre-configured with deadlines, pass marks and limits

> Instant feedback on assessments

> Centralised video training with no fast-forwarding

> Managed question banks for consistent quality

Empowerment

> Various User roles: Admin, Team Leader, Learner etc.

> Certificate and badge issuing with verification

Managed by Secarma. Powered by You.

Secarma's in-house team builds and manages your LMS content so your team can focus on learning, not admin. You can assign courses, monitor progress and stay informed through your client dashboard, while we ensure the quality and accuracy of the content.

Need something new? We can create it.

Need help tracking compliance? It's already in place.

Ready to see it in action?

If you're looking for a scalable, professional learning platform that delivers more than just tick-box training, Secarma LMS is ready to support your growth.
