

# Gap Analysis ISO27001

Our Gap Analysis assessment for ISO27001 evaluates your organisations current security programme looking beyond technical competency in relation to its ability to protect, detect and respond to security threats.

For this Gap Analysis, Secarma has built a framework around the ISO27001 accreditation that focuses on each control and standard within and create a map for implementation. We can also check whether your organisation is in a position to pass certifications such as Cyber Essentials.

## Who Is It For?

This assessment is for any organisation contemplating certification to ISO27001, or that wants to assess and improve their current security programme against the industry standard. Going through this process helps businesses to prepare for today's most advanced threats.

## How Can We Help?

In working with you, Secarma's mission is to simplify the implementation of cybersecurity practices and align them with your organisation's objectives and policies. In conducting our Gap Analysis we will risk assess your current security posture through an initial orientation meeting, a documentation review process and interview workshops.

This process gives you a comprehensive understanding of your security weak spots through to your strengths, ascertaining the degree of maturity in each area, before delivering results that explain how to improve your current posture.

## What We Review

Gap Analysis ISO27001 evaluates an organisation's preparedness and grades their maturity in the following areas:

- Information Security Policies
- Organisation of Information Security
- Human Resources Security
- Asset Management
- Access Control
- Cryptography
- Physical and Environmental security
- Operations Security
- Communications Security
- System Acquisition, Development and Maintenance
- Supplier Relationship
- Information Security Incident Management
- Information Security for Business Continuity Management
- Compliance
