SecureApp

Simple, Trusted Certification for App Security

Secarma's SecureApp certification verifies that your application meets recognised security standards without the complexity. Based on the OWASP L1 benchmark, this certification offers a clear, accessible way to demonstrate that your app follows basic secure development principles. Designed for web and mobile applications, SecureApp is ideal for organisations who need to show compliance, build trust and meet Secured by Design requirements.

Business Benefits

SecureApp helps you bridge the gap between technical testing and business assurance - making application security easier to communicate and prove.

- **Prove your app is secure**
  Certification shows your application has met OWASP L1 requirements for basic good practice.

- **Meet Secured by Design expectations**
  Required for entry into the Secure Connected Devices scheme and recognised as an approved SBD standard.

- **Build customer trust**
  Offer an easy-to-understand certificate instead of exposing sensitive penetration test data.

- **Streamline assurance**
  A faster, simpler way to demonstrate security for clients, investors or regulators.

- **Support IoT deployments**
  Perfect for connected products that rely on apps for management or functionality.

- **Keep things lightweight**
  A practical alternative to lengthy audits or complex development frameworks.

Why choose Secarma SecureApp?

We're one of the first official Secured by Design partner offering OWASP L1 certification, and we make the process work for your business.

- **SBD approved provider**
  We are uniquely authorised to issue OWASP L1 certification under the SBD scheme.

- **Business-first mindset**
  We focus on relevance, clarity and value, not upselling or overcomplicating.

- **Supportive Process**
  We work collaboratively to help you succeed. Our experts offer guidance throughout the journey.

- **Secure and shareable**
  Your certificate is easy to present to clients and doesn't include sensitive vulnerability data.

What to expect from SecureApp Certification

The certification process is streamlined and built around you.

- **Submit your app**
  You provide access to the application for testing (web or mobile).

- **Security test conducted**
  Our consultants assess your application against OWASP L1 standards.

- **Certification issued**
  If all requirements are met, you receive a Secarma SecureApp certificate, valid for 12 months.

Traditional pen test reports are often too complex for customers and lack a clear stamp of approval. SecureApp gives you a recognised, simplified certification that's easy to share, and tailored for today's app-first products and services.

Certificate of Testing

This is to certify that the following device or software has been assessed and successfully certified against the **Level 1 OWASP Application Security Verification Standard (ASVS)** by Secarma Ltd.

Amazon UK Ltd

Ring Doorbell

This certification confirms that the assessed product has met the security requirements outlined in OWASP Level 1 standards, ensuring fundamental security measures are in place to protect against common threats.

CERTIFICATE NUMBER SEC-96575-01

Certified Date: 01/02/2025

Certification Valid Until: 01/02/2026

Assessment Conducted By: Conor Burgess

This certificate remains valid until the expiration date unless there are significant changes to the product that require reassessment.
